A Brand by Hankook Tire

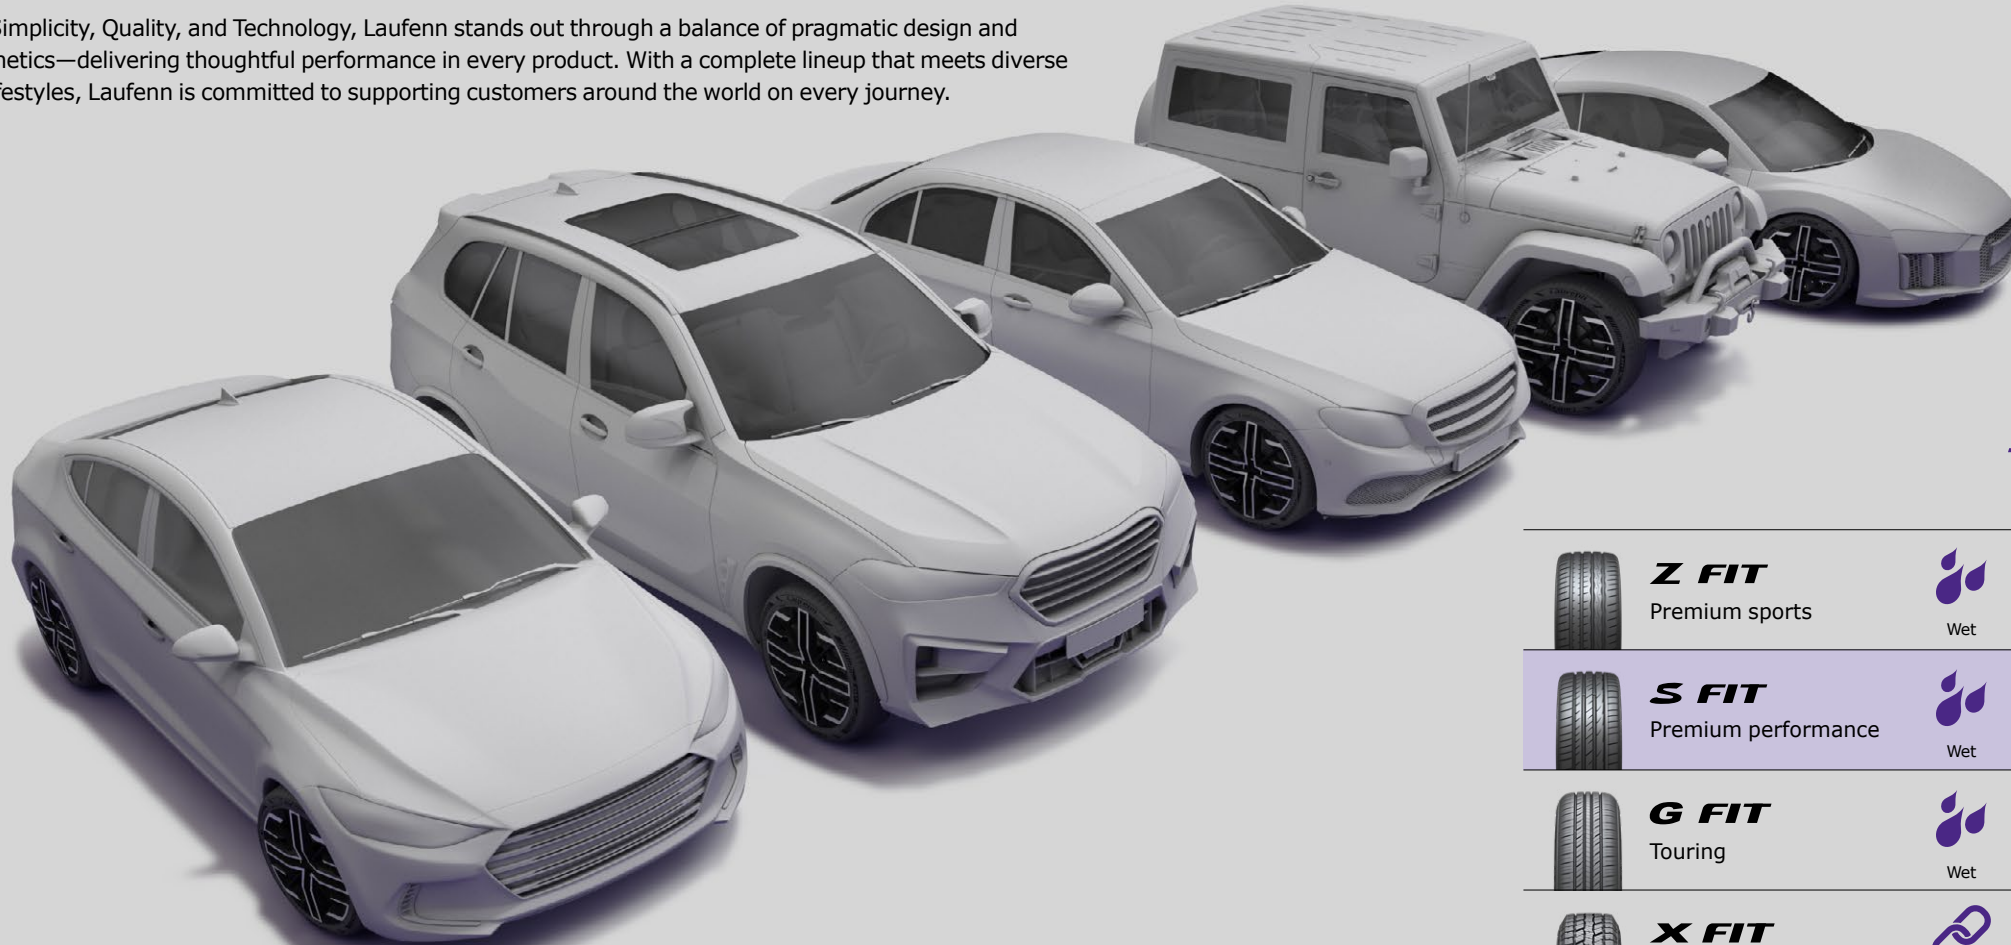

OFFICIAL
PARTNER

Tyre that fits

Laufenn is a life-fit brand designed for those who value practicality in both work and life. Created for individuals with a passion for driving and a tyre-conscious lifestyle, Laufenn speaks to those who continually seek purpose and value in everything they do.

Defined by Simplicity, Quality, and Technology, Laufenn stands out through a balance of pragmatic design and refined aesthetics—delivering thoughtful performance in every product. With a complete lineup that meets diverse needs and lifestyles, Laufenn is committed to supporting customers around the world on every journey.

Stronger on Wet, Longer on Every Mile

S FIT² is back, with stronger performance than ever.

S FIT² takes driving to the next level with exceptional wet grip and precise handling, delivering a more sporty and empowering experience.

Furthermore, exceptional mileage carries you further.

Inch	15"~20"

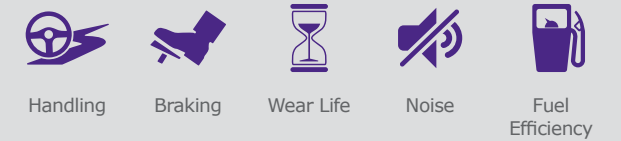

FEATURES

- Superior Wet Performance
- Responsive Steering for Sporty Driving
- Long-Lasting Tyres for Every Journey
- Energy Efficient & Comfort

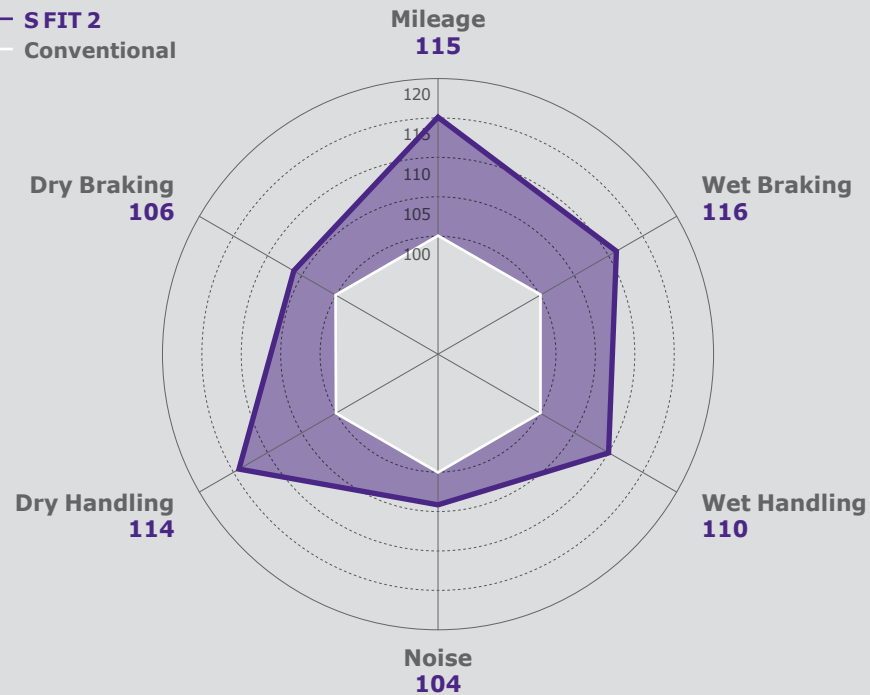

Property

Benefit

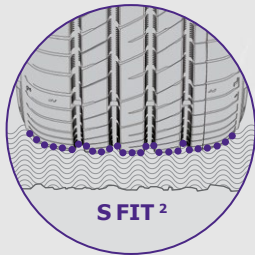

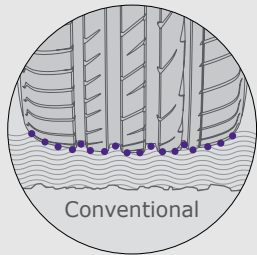

— S FIT 2
— Conventional

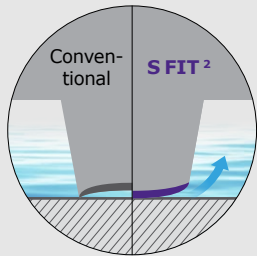

Superior Wet Performance

S FIT² delivers exceptional wet performance, ensuring confident and enjoyable driving on wet roads.

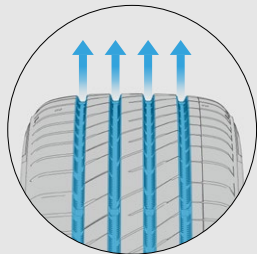

Superior Wet Performance

High silica compound compared to its predecessor enhances flexibility and bonding with wet surfaces, delivering exceptional wet braking performance.

Advanced Wet Grip

Convex block design enhances water drainage through efficient water dispersion, improving tyre contact on wet roads.

Enhanced Hydroplaning Resistance

The 4 straight grooves efficiently channel water away from the tyre contact area, helping to prevent hydroplaning and enhance water drainage under wet conditions.

Wet Handling Performance improved by **10%**

compared to its predecessor

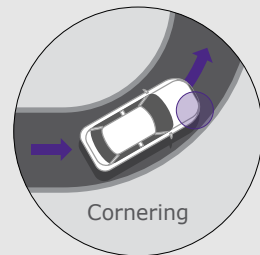

S FIT²

Conventional

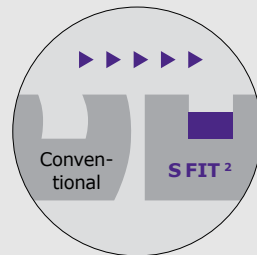

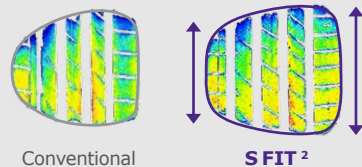

Responsive Steering for Sporty Driving

S FIT² ensures high-speed stability and precise handling on any road, allowing drivers to enjoy dynamic and sporty driving.

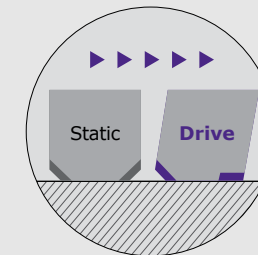

Cornering Stability with High Grip

The reinforced outer shoulder blocks and high-grip resin compound maximise road contact, ensuring precise steering control and stable cornering at high speed.

Consistent Performance

Tie-bars in the lateral grooves design control block distortion, increasing tyre stiffness and ensuring comfort with consistent performance.

Precise Steering

Chamfer design enhances steering response and cornering stability by ensuring consistent block edge contact.

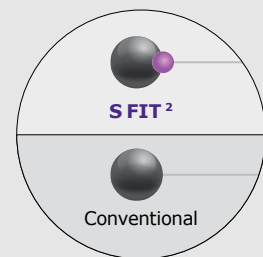

Wear Life

**ALIGNMENT
INDICATOR**

Easily check tread wear
with the 'L' mark on the sidewall.

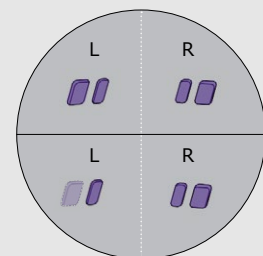

Long-Lasting Tyres for Every Journey

S FIT² provides increased mileage and prevents uneven tread wear, which makes your tyre last longer and helps you go further on every journey.

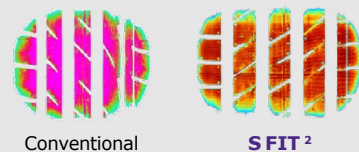

Increased Bonding for Long Mileage

The new generation polymer, combined with optimised mixing technology, ensures better interaction and bonding among compound elements, resulting in even distribution throughout the compound and higher mileage.

Longevity Enhancer

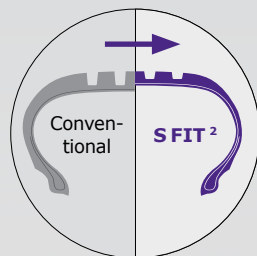

The uniform groove design promotes even wear by distributing contact pressure evenly across the tread. During your journey, the uneven wear indicator helps detect alignment issues early and extend tyre life.

Mileage
150%
improved

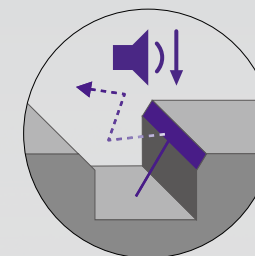

Energy Efficient & Comfort

S FIT² is built with an innovative structure and design that reduces energy consumption and noise, making it suitable not only for conventional cars with combustion and hybrid engines but also for electric vehicles.

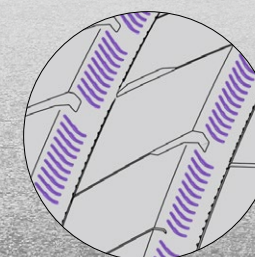

Optimised Structure For Energy Efficiency

The innovative structure optimises weight, reducing energy and grip loss while enhancing stability and safety.

Reduced Impact Noise

By applying Chamfer to the main grooves, impact noises are reduced, ensuring a quieter driving experience.

Less Vibration, Less Noise

Reduce noise by narrowing the air path within the grooves, which minimises the resonance and vibration that cause noise.

Comparison between Electric and Internal Combustion Engine Vehicles

- ① Quieter operation
- ② Added battery weight (up to 30%)
- ③ Charging time and travel range limitations

Electric Vehicle Tyer Characteristics Specifically Designed and Optimised for:

- ① Comfortable ride with reduced road noise
- ② Lower tyre weight and improved rolling resistance to extend battery life and driving range

* Battery EVs and Plug-in Hybrid EVs share similar characteristics
